

Tiefill

Class R4 Waterproof Tie Hole Filler

Product Overview

Rapid setting polymer modified cementitious mortar for tie holes and small voids in new construction.

Description

TIEFILL is a single component, polymer modified, fibre reinforced, Portland cement-based repair compound which exhibits unique hydraulic properties to produce a rapid setting mortar.

Uses

Class R4 mortar, suitable for repair methods 3.1, 7.1, 7.2 as defined by EN 1504-3.

Advantages

- Incorporates the latest cement chemistry, microsilica, fibre and styrene acrylic copolymer technology.
- Pre-packaged materials in a convenient pack size.
- Simply mixed with clean water, no substrate priming required.
- Sets in 30 minutes at 20°C, yielding a durable, high strength mortar.
- Resists 10 bar water pressure after 72 hours' curing.
- Bond strength exceeds tensile strength of concrete, ensuring monolithic performance.
- Polymer modification gives enhanced adhesion and low permeability, providing excellent protection from acid gases, moisture ingress and chlorides.

Compliance

- UKCA & CE marked in accordance with EN 1504-3.
- Listed under Regulation 31 - England and Wales: Regulation 33 - Scotland: Regulation 30 - NI: for use with potable water.
- Highways Standard Series 5700 (Concrete Repairs) and CS 462 (Repair & Management of Deteriorated Concrete Structures).
- Compliant with LU Standard 1-085 'Fire Safety Performance of Materials'.

Application Instructions

Preparation

The areas to be repaired must be free from all unsound material including laitance dust, oil, grease, corrosion by-products and organic growth. Smooth surfaces should be roughened by appropriate mechanical means. The compressive strength of the parent concrete should be minimum 20 MPa.

For the treatment of tie-holes formed by through-ties, cut back and remove any remaining plastic tube to circa 40-50mm from the concrete face. To eliminate the possibility of water tracking around the plastic tube, it should be plugged with a proprietary stopper.

The prepared substrate should be thoroughly soaked with clean water until uniformly saturated without standing water.

Mixing

Mix sufficient **TIEFILL** to use within the working life of the material. Adding the water first, use the mixing scoop to proportion 1 part of water with 6 parts of powder. This equates to a mix ratio of 9.4:1 by weight.

A complete 8kg pack requires 850ml of clean water. Quantities less than 2kg can be mixed by hand. Larger quantities should be mechanically mixed in a clean drum using a slow speed drill and paddle. A normal mixer is **NOT** suitable.

Mix for 2-3 minutes to produce a cohesive thixotropic mortar. If necessary, adjust the consistency by adding a minimal amount of extra powder or water. Use without delay.

- Note - These instructions must be adhered to as Flexcrete will not be responsible for failure due to incorrect mixing.

Placing

For normal applications, **TIEFILL** should be compacted, using a placing technique to remove entrapped air, in layers not exceeding 75mm deep.

For multi-layer applications, it is important to ensure that the previous layers are well keyed and stable but not fully set (typically 30-45 minutes) prior to the application of subsequent layers.

Final profiling of a high quality can be easily achieved with a clean, dampened steel float.

When the colour and surface texture of the surrounding concrete has to be matched, the final 15-25mm layer should be filled with **UNIMATCH**.

Curing

Normal concreting procedures must be adhered to. Protect from strong sunlight and drying winds with **CURE-SEAL WB**, polythene sheeting, damp hessian or similar.

Limitations

Do not use **TIEFILL** when the temperature is below 5°C and falling. Not suitable for use on trafficked areas.

Cleaning and Storage

- All tools should be cleaned with water immediately after use.
- Materials can be stored for 12 months in dry, frost free conditions with unopened bags at 20°C.

Packaging

- **TIEFILL** is supplied in 8kg buckets.

Yield and Coverage

- 4 litres per 8kg.
- 8kg covers 0.4m² at 10mm thickness.

Rapid Tie Bolt System			
Tie Rod Cover (mm)	Tie Rod Size (mm)	Typical Number of Holes	
		8kg Pack (4 Litres)	6 : 1 Scoop Mix (235CC)
38	15	90	5
50	15	74	4
75	15	57	3
Through Tie Type			
30	25	229	13

Health and Safety

- Safety Data Sheets are available on request.

Application Top Tips

1. Take care if using very cold mixing water as this will accelerate setting of **TIEFILL**.
2. **DO NOT WET OUT OR PRIME** between layers.
3. **DO NOT OVER TROWEL**. If the mortar begins to slump, allow to stabilise and refinish.
4. When finishing, trowel from centre out towards the perimeter working into the edges of the tie hole.
5. **TIEFILL** is particularly suited to cold weather use but should not be applied to frozen substrates.
6. Hot Weather Working (See separate Guide)
 - Store material in cool conditions to maximise working life.
 - Shade applied material from strong sunlight.
 - Spray apply a second mist coat of **CURE-SEAL WB**.
 - If possible, avoid extreme temperatures by working at night.
