Product Data Sheet Edition 11.2011 Identification no. 020945074100000016 Version no. 01

EPDM Primer

One-component primer for consistent and durable adhesion between Sika Liquid Plastics roof waterproofing systems and EPDM

Product Description	Sika Liquid Plastics' EPDM Primer is a single component, solvent based, synthetic rubber primer designed to deliver enhanced adhesion to EPDM rubber substrates.
Uses	For the priming of EPDM substrates prior to the application of Decothane roof waterproofing systems.
Characteristics / Advantages	 Excellent adhesion to new and aged EPDM rubber Fast drying and curing Quick and easy application

Product Data

Form	
Appearance	Transparent, green / brown coloured, low viscosity liquid
Packaging	3.78 litre pack
Storage	
Storage Conditions / Shelf Life	Store in original, unopened and undamaged sealed packaging in dry conditions away from direct sunlight at temperatures >0 $^{\circ}$ C and < 25 $^{\circ}$ C. Protect from frost.
	A shelf-life of 12 months is expected, from the date of production, when stored in accordance with the above recommendations at a temperature of 20 $^{\circ}$ C. Exposure to higher temperatures will reduce the shelf-life.
	Reference should also be made to the storage recommendations of the material safety datasheet.
Technical Data	
Chemical Base	Synthetic rubber in a hydrocarbon solvent
Density	0.9 kg/l
Flash Point	4 °C

System Information

EPDM membranes must be thoroughly clean, free of grease and dry.
Clean surface thoroughly and ensure substrate is well bonded. Ensure surface is free from grease and free from excessive mica. Clean appropriate to contamination at site. Usually a detergent water scrub and a thorough rinse will suffice. Where heavy or specific contamination is present please consult Sika Liquid Plastics' Technical Services for advice.
Prior to the commencement of works, adhesion / substrate compatibility trials should be carried out onto the EPDM membrane to confirm substrate suitability and adhesion of the proposed system.
+5 ℃ min. / +40 ℃ max.
Beware of condensation! Surface temperature during application must be at least +3 °C above dew point.
Do not use if conditions are close to dew point as condensation forming on the primer can affect adhesion. If this occurs, allow the surface to dry and apply fresh primer.
Maximum spread rate of 7 square metres per litre (equivalent to a minimum quantity of 0.143 litre per square metre).
tions
Stir thoroughly with an EPI or equivalent mixer in an electric drill until all settled pigments are dispersed and the material is consistent in colour. A minimum of 5 minutes stirring is recommended. Frequent stirring (every 15-20 minutes) is recommended. Do not thin. Thinning will affect performance.
Apply one coat of Sika Liquid Plastics' EPDM Primer to securely fixed, prepared, dry surfaces by brush or short pile roller, at a maximum spread rate of 7 square metres per litre (equivalent to a minimum quantity of 0.143 litre per square metre) and leave to dry.
As advised above do not use if the ambient temperature is close to dew point as condensation will form on the wet primer affecting adhesion. If this occurs, allow the surface to dry and apply fresh primer.
Brush or short pile roller
Leave to dry for a minimum of 30 minutes prior to overcoating.
Allow the primer to dry prior to overcoating. Low temperatures will increase overcoating times.
Overcoating is recommended within 24 hours in warm conditions and 48 hours in cool conditions.

Notes on Application

Application Method	Stir thoroughly with an EPI or equivalent mixer in an electric drill until all settled pigments are dispersed and the material is consistent in colour. A minimum of 5 minutes stirring is recommended. Frequent stirring (every 15-20 minutes) is recommended. Do not thin. Thinning will affect performance.
	Apply one coat of Sika Liquid Plastics' EPDM Primer to securely fixed, prepared, dry surfaces by brush or short pile roller, at a maximum spread rate of 7 square metres per litre (equivalent to a minimum quantity of 0.143 litre per square metre) and leave to dry.
	As advised above do not use if the ambient temperature is close to dew point as condensation will form on the wet primer affecting adhesion. If this occurs, allow the surface to dry and apply fresh primer.
Application Tools	Brush or short pile roller
Waiting Time / Overcoating	Leave to dry for a minimum of 30 minutes prior to overcoating.
	Allow the primer to dry prior to overcoating. Low temperatures will increase overcoating times.
	Overcoating is recommended within 24 hours in warm conditions and 48 hours in cool conditions.
Limitations	Do not apply in wet weather or to wet surfaces.
	Overcoat within 48 hours, repriming will be necessary if the surface is subjected to severe weather or contamination before overcoating
	Opening tins will cause the product to gel. Gelled material should not be used as performance will be affected.
Health and Safety Information	For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.
