

Ultra-rapid setting, polymer-modified dry-spray concrete

CI/SfB Yq4 Uniclass L33 February 2020

webercem spray RS

About this product

webercem spray RS is a ready-to-use, polymer-modified, dry-sprayed concrete able to achieve very rapid early set, ideal for concrete repairs where time constraints demand early strength gain. The material contains inert limestone aggregates, dust suppressants and accelerators. The formulation is designed for the dry spray process method of application with reduced rebound and excellent sprayability. Conforms with BS EN 1504-3 as a Class R4 repair product.

Physical properties		
Dry Density	Approx 2250 kg/m³	
Initial set	<10 mins at 20°C	
Electrical resistivity (4-point Wenner probe)	Dry condition: 203 k Ω .cm, 28day immersion: 96 k Ω .cm	
Initial Surface Absorption (ISAT) BS 1881-208	Requirement for low absorption: < 0.10 ml/m²/s in 60 mins, Result 0.09 ml/m²/s	
Apparent Chloride Ion Diffusion Coefficient (Vinci Technology Centre TP 6120/88/1811)	4.95 x 10 ⁻¹³ m ² /s at 20°C	
Chloride absorption (Profile grinding Vinci Technology method)	0.8% Cl at 2 mm depth, 0.05% Cl at 10 mm depth	
Oxygen Diffusion Coefficient (Vinci Technology Centre TP 1303/90/4672)	$3.74 \times 10^{-7} \text{m}^2/\text{s}$	
Carbon Dioxide Diffusion (DCO ₂)	$DCO_2 = 1.18 \times 10^{-6} \text{ cm}^2 \text{s}^{-1}$	
Carbon Dioxide Diffusion	Coefficient µ = 104,000	
Carbon Dioxide Diffusion	Equivalent air layer thickness S _D = 229 m	
Carbon Dioxide Diffusion	Equivalent concrete thickness $S_C = 57$ cm	
Mechanical properties		
Compressive strength on cored samples BS EN 12504-1:2009, tested at 20°C	3 days 7 days 28 days	37 MPa 40 MPa >45 MPa

Uses

- Rapid repairs to structures within tidal zones
- Repairs to dock walls
- Repairs to coastal structures
- Structural repairs to jetties, piers, sea walls, quays and docks
- Repairs to river bridge abutments or piers
- Primary linings to underground workings
- Structural repairs to concrete beams, columns and soffits
- Repairs to railway bridge and viaduct soffits

Features and benefits

- Rapid setting concrete allows work to continue in tidal zones
- ▲ Rapid set prevents wash out from tidal action or flowing water
- ▲ Economical with low rebound
- ▲ High-build up to 150 mm thickness can be applied in one pass to vertical faces
- ▲ Good adhesion to concrete substrates
- ▲ Non reactive aggregate complying with HA Clause 1704
- ▲ Total chloride ion content is less than 0.05%. No calcium chloride or admixtures containing chloride salts are used.
- ▲ Good resistance to salts absorption

webercem spray RS

Preparation

As with all repairs and applications it is essential to apply to a clean, sound surface free from all grease, oil, dust and loose material.

Concrete

Concrete substrates must be adequately prepared by a suitable mechanical method such as scabbling, grit blasting, water jetting or needle gunning, or by such other means as appropriate. Concrete must be carefully prepared to give a clean, freshly-exposed surface. The outer limits of concrete patches should be cut square to avoid feather edges.

Old concrete surfaces contaminated with oil or grease must be cleaned with a suitable detergent. Care must be taken to ensure that the oil or grease is removed from the surface and not simply spread over a larger area.

Steel Substrates

Reinforcing bars should be exposed leaving a clear gap at least 25mm behind the bars to allow for full encapsulation. Steel bars should be free of loose rust and grease. Ideally they should be grit blasted to a uniform grey metal finish to achieve first quality to BS 7079-A1 followed by degreasing with a suitable solvent.

Reducing suction

Before using **webercem spray RS**, the concrete substrate must be thoroughly pre-wetted for at least 30 minutes and then all surplus water removed. Water from the spray nozzle followed by high pressure air is the method commonly adopted.

Application

Guidelines on the method of working are detailed in the *Code of Practice for Sprayed Concrete* published by the Concrete Society and should be strictly observed.

In addition, request the Weber Technical Information Note on the best practice for using webercem spray RS.

webercem spray RS should be emptied from the bags directly into the hopper of the dry process spraying machine. The equipment should be balanced so as to produce a steady stream of material with minimal pulsing.

The amount of water added at the spraying nozzle will be controlled by the nozzleman –

too low an addition will increase rebound and dust emission; too wet a mix will slump. The correct amount of water can be judged by the appearance of the sprayed concrete; any glossiness of the surface should be avoided.

Note that **webercem spray RS** has a lower water demand than **webercem spray DS** and will require less water. Keep the water content as low as possible

In case of a long delay between applied coats of the sprayed concrete, the surface of the newly applied hardened concrete should be water jetted using maximum air pressure and water flow through the nozzle to ensure that any laitance and all weak or loose material has been removed.

The surface should be allowed to drain before proceeding with the next coat.

webercem spray RS can be applied down to 15 mm thickness but, because of the higher cement content, (due to aggregate loss through rebound) there is the likelihood of greater shrinkage. The recommended minimum thickness is 25 mm. The recommended minimum thickness for protection over steel is 40 mm.

Finishing

This material will set very quickly and any finishing must take place within 10 minutes of application.

We recommend an 'as sprayed' finish is used with **webercem spray RS**.

Curing

Proper curing is essential to maintain the strength development. As the **webercem spray RS** is rapid setting, it develops an exotherm that can drive off water that is needed for full hydration. This water needs to be replaced for curing. The best method for curing this product is to spray the surface with clean water as soon as possible as concrete spraying has been finished. On large areas, the water should be applied as soon as the concrete hardens, in sections rather than waiting for the whole area to be completed.

Where possible and where site restrictions are not a hindrance, water can be applied by direct spray at intervals of about 30 minutes or by spray bar, for at least 2 hours after completion of spraying.

In summer conditions, protect from direct sunlight and warm drying winds and protect from frost in winter.

Further details on curing and protection are available from the Weber Technical Services office.

Performance to BS EN 1504-3				
Performance characteristic	Method	BS EN 1504 requirement	Test result	
Compressive strength	EN 12190	≥ 45 MPa	> 45 MPa	
Chloride ion content	EN 1015-17	< 0.05%	0.01%	
Adhesive bond	EN 1542	≥ 2.0 MPa	2.2 MPa	
Carbonation resistance	EN 13295	$d_{\it k}$ < control concrete (MC 0.45)	d _k < control	
Elastic modulus	EN 13412	≥ 20 GPa	28.5 GPa	
Capillary absorption	EN 13057	$\leq 0.5 \text{ (kg.m}^{-2}.h^{-0.5})$	0.37 (kg.m ⁻² .h ^{-0.5})	
Freeze/thaw resistance	BS EN 13687-1	Bond ≥ 2.0 MPa	Bond 2.2 MPa	
Chloride ion ingress	EN 13396	Declared value	Control 0.023% no immersion Test 0.029% at 10 mm depth after 6 months	

See next page for Packaging, Coverage, Storage, Health and Safety.

webercem spray RS

Packaging

webercem spray RS is supplied in 25 kg polylined paper bags.

Coverage

Approximately 12.5 litres per 25 kg bag. An allowance must be made for rebound and wastage.

Storage and shelf life

Store the product in a dry covered enclosure off the ground at temperatures above 5°C and protect from frost, rain and high humidity. This product has a shelf life of 6 months from date of manufacture.

Health and safety

Contains cement (Contains chromium (VI). May produce an allergic reaction). Harmful by inhalation. Irritating to eyes and skin. Keep out of the reach of children. In case of contact with eyes, rinse immediately with plenty of water and seek medical help. After contact with skin, wash immediately with plenty of soap and water. Wear suitable protective clothing, gloves and eye/face protection.

For further information, please request the Material Safety Data Sheet for this product.

Technical services

Weber's Customer Services Department has a team of experienced advisors available to provide on-site advice both at the specification stage and during application. Detailed specifications can be provided for specific projects or more general works. Site visits and on-site demonstrations can be arranged on request.
