

# RAPID

## Waterproofing Plugging Compound Mortar & Slurry

### PRODUCT BENEFITS

The Vandex rapid system's waterproofing properties develop even when in contact with running water. As a result, our products can withstand maximum load only hours after application, resulting in minimal interruption to the refurbishment process. Furthermore, the products are resistant to domestic sewage.

Chemically resistant waterproof coating within a few hours due to its composition of cement, quartz with graded grain-size distribution and unique chemical ingredients of inorganic nature, the Vandex rapid system product range cures completely within a few hours. In addition, the waterproof coating formed is highly resistant to abrasion and chemicals.

**2 Minutes  
setting time**

**Stops flowing  
water**

**Installation of pipes  
in manholes**

**Designed for use in  
sewers & manholes**
